Your Journey to
Perfect Vision
Begins Here

LASIK SURGERY

Preparing for LASIK procedure

- ◆ Contact lenses must not be worn at least 7 days for regular soft lenses (14 days for toric/hard) before the screening.
- ◆ Do not apply any skin care products, makeup and perfume as they may be a source of bacterial infection.
- ◆ Wear loose and comfortable clothing.
- ◆ Do not wear accessories, jewelries, and hair clips.
- ◆ For safety, arrange transportation after the procedure. Your eyes may be blurred and light sensitive for a few hours. You will not be able to drive immediately.

LASIK Full Screening Steps

STEP 1: Full Screening (2-3 hours)

You will undergo a series of comprehensive eye tests to determine your eligibility for the LASIK procedure.

STEP 2: Cycloplegic Refraction

This is done on the same day as your retina check. Dilating eye drops are used to temporarily weaken your eyes' focusing mechanism, allowing us to measure your true eye grade. The effect of dilation usually lasts 4–6 hours.

STEP 3: Evaluation / Counseling

The results of your screening will be evaluated and the Ophthalmologist will recommend the best treatment for you. You will know if you're eligible for LASIK. If so, the LASIK consultant will discuss our LASIK packages with details.

OUR TREATMENTS:

SMART LASIK

The most up-to-date vision correction procedure that features some of the most advanced eye machines available (Ziemer – Femto LDV Z8 + Schwind Amaris 1050RS), delivering upgraded results and efficiency.

ULTRA LASIK

This premier and advanced LASIK procedure is highly-recommended for patients who have higher visual acuity, eye grades, and degrees of astigmatism or other refractive errors. This also provides a higher rate of faster recovery time.

Z Prime LASIK

This LASIK procedure is usually recommended for those who only have a mild degree of myopia (nearsightedness), hyperopia (farsightedness), or astigmatism.

TransPRK

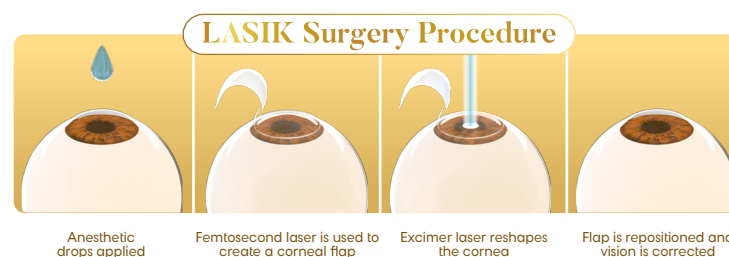

Transepithelial Photorefractive Keratectomy (TransPRK) is a flapless vision correction procedure that treats nearsightedness (myopia), farsightedness (hyperopia), and astigmatism with Excimer Laser to precisely reshape the cornea.

Corneal Collagen Cross Linking (CXL)

This therapeutic procedure is usually done in combination with any LASIK procedure to biomechanically strengthen thin corneas for a greater and lasting stability of vision over time.

Thin Flap LASIK (TFL)

This is also done in combination with any LASIK procedure for those with high eye grades and thin corneas to conserve corneal tissue. This is usually recommended to patients on a case-to-case basis.

Recovery essentials after LASIK

- ◆ Eye drops should be administered every 3 hours within a 5-minute interval of each drop (waking hours only) for 7 days.
- ◆ Eye shield should be worn during sleeping hours for 7 nights (medical tape included).
- ◆ Protective glasses should be worn during waking hours for 7 days.

Frequently Asked Questions (FAQs):

1. What is the minimum age requirement for LASIK?

One must be at least 18 years old to undergo LASIK, ensuring that your refractive error is stable.

2. Is it painful?

The treatment is relatively painless. Anesthetic drops will numb your eye, and you may feel light eye pressure.

3. How long does the LASIK procedure last?

On average, a LASIK procedure lasts only around 10 - 12 minutes.

4. Does the effect of LASIK last for good?

Although the effect of LASIK does not wear off, as we age the vision may change and with this, our warranty can cover that for a certain time and one can be eligible for an enhancement LASIK (very rare though) to ensure continued bright vision.

OTHER VISION CORRECTION PROCEDURES:

- ◆ PresbyMax LASIK
- ◆ Implantable Contact Lens (ICL)
- ◆ Refractive Lens Exchange (RLE)
- ◆ Femtosecond Laser Assisted Cataract Surgery (FLACS)
- ◆ Transepithelial Photorefractive Keratectomy (TransPRK)
- ◆ Corneal Lenticule Extraction for Advanced Refractive Correction (CLEAR)
